	<i>Acronyms</i>	<i>page</i> xix
<b>1</b>	<b>Introduction</b>	3
	1.1 Motivation	3
	1.2 Wireless networks	4
	1.2.1 Overview	4
	1.2.2 Traditional Layered Architecture	6
	1.2.3 Necessity of Cross-Layer Optimization	9
	1.3 Book Outline	12
	<b>PART ONE BASIC CONCEPTS</b>	17
<b>2</b>	<b>Wireless Channel Properties</b>	20
	2.1 Path Loss	20
	2.2 Shadowing	21
	2.3 Small Scale Fading	22
	2.3.1 Flat-Fading Channels	23
	2.3.2 Frequency-Selective Fading Channels	26
	2.4 Channel Estimation	26
	2.4.1 Flat Slow Fading Channels	27
	2.4.2 Frequency-Selective Slow Fading Channels	28
	2.4.3 Fast Fading Channels	29
	2.4.4 Conclusion	29
	2.5 Other Challenges	30
<b>3</b>	<b>Spectral and Energy Efficiencies of Wireless Networks</b>	31
	3.1 Spectral Efficiency	31
	3.2 Energy Efficiency	32
	3.3 Link Metrics versus Network Metrics	33
	3.3.1 Link Spectral Efficiency	33

3.3.2	Network Spectral Efficiency	35
3.3.3	Link Energy Efficiency	36
3.3.4	Network Energy Efficiency	37
<b>4</b>	<b>Centralized Resource Management in Wireless Networks</b>	<b>39</b>
4.1	Overview	39
4.2	Wireless Scheduling Challenges	40
4.3	Centralized Scheduling Algorithms	43
4.3.1	Round Robin Scheduling	44
4.3.2	Max Throughput Scheduling	45
4.3.3	Proportional Fair Scheduling	46
4.3.4	Max-Min Scheduling	47
4.3.5	Max Utility Scheduling	48
<b>5</b>	<b>Distributed Resource Management in Wireless Networks</b>	<b>53</b>
5.1	Overview	53
5.2	ALOHA	55
5.2.1	Pure ALOHA	55
5.2.2	Slotted ALOHA	56
5.3	Carrier Sense Multiple Access (CSMA)	56
5.3.1	Non-persistent CSMA	57
5.3.2	1-persistent CSMA	58
5.3.3	p-persistent CSMA	58
5.3.4	Effect of Detection Delay	58
5.4	CSMA with Collision Detection	59
5.5	Carrier Sense Multiple Access with Collision Avoidance (CSMA/CA)	60
5.5.1	Hidden and Exposed Terminal Problems	60
5.5.2	Carrier Sense Multiple Access with Collision Avoidance (CSMA/CA)	60
	<b>PART TWO CENTRALIZED CROSS-LAYER OPTIMIZATION</b>	<b>65</b>
<b>6</b>	<b>Overview</b>	<b>68</b>
6.1	System Model and Problem Description	70
6.1.1	Channel Characteristics in OFDM	70
6.1.2	Rate Adaptation in OFDM	71
6.1.3	Dynamic Subcarrier Assignment and Adaptive Power Allocation	72
6.1.4	Queue Structure	72

<i>Contents</i>		xi
6.1.5	Problem Description	73
6.2	Approach	73
<b>7</b>	<b>Utility-Based Optimization Framework for OFDMA</b>	<b>75</b>
7.1	Rate-Based Utility Functions	75
7.2	Theoretical Framework	76
7.2.1	Problem Formulation	76
7.2.2	Dynamic Subcarrier Assignment	78
7.2.3	Adaptive Power Allocation	80
7.2.4	Properties of Cross-Layer Optimization	84
<b>8</b>	<b>Algorithm Development for Utility-Based Optimization</b>	<b>87</b>
8.1	Dynamic Subcarrier Assignment Algorithms	87
8.2	Adaptive Power Allocation Algorithms	93
8.2.1	APA for Fixed Subcarrier Assignment	93
8.2.2	Sequential-Linear-Approximation Water-filling Algorithm for Continuous Rate Adaptation	93
8.2.3	Greedy Power Allocation Algorithm Based on Maximizing Total Utility for Discrete Rate Adaptation	94
8.3	Joint Dynamic Subcarrier Assignment and Adaptive Power Allocation	96
8.4	Algorithm Modification for Nonconcave Utility Functions	96
8.5	Cross-Layer Optimization Based on Utility Functions With Respect to Average Data Rates	98
8.6	Efficiency and Fairness	100
8.6.1	Fairness of “Extreme OFDM” Using Utility Functions With Respect to Instantaneous Data Rates	102
8.6.2	Fairness of “Practical OFDM” Using Utility Functions With Respect to Average Data Rates	102
8.7	Simulation Results	104
8.8	Summary	107
<b>9</b>	<b>Joint Channel- and Queue-Aware Multicarrier Scheduling Using Delay-Based Utility Functions</b>	<b>112</b>
9.1	Introduction	112
9.2	Extending Scheduling Rules in Single-Carrier Networks into OFDMA Networks	113
9.2.1	Max-Sum-Capacity (MSC) Rule	114
9.2.2	Proportional Fair (PF) Scheduling	114

9.2.3	Modified Largest Weighted Delay First (M-LWDF) Rule	114
9.2.4	Exponential (EXP) Rule	115
9.3	Max-Delay-Utility (MDU) Scheduling	115
9.3.1	Utility Functions	115
9.3.2	Optimization Objective	116
9.3.3	Problem Formulation in OFDMA	118
9.3.4	Algorithms	118
9.4	Stability	119
9.4.1	Background and Definition of Stability	119
9.4.2	Capacity Region	120
9.4.3	Maximum Stability Region	121
9.5	Proof of Theorem 9.4	126
9.6	Further Improvement Through Delay Transmit Diversity and Adaptive Power Allocation	130
9.6.1	Joint Dynamic Subcarrier Assignment and Adaptive Power Allocation	131
9.6.2	Delay Transmit Diversity	131
9.7	Simulation Results and Performance Comparison	133
9.7.1	Performance Comparison	133
9.7.2	Improvement of Delay Transmit Diversity and Adaptive Power Allocation	135
9.8	Summary	136
<b>10</b>	<b>Utility-Based Generalized QoS Scheduling for Heterogeneous Traffic</b>	138
10.1	Introduction	138
10.2	MDU Scheduling for Heterogeneous Traffic	139
10.2.1	Mechanisms of MDU Scheduling for Diverse QoS Requirements	140
10.2.2	Marginal Utility Functions for MDU Scheduling	141
10.3	Simulation	142
10.3.1	Simulation Conditions	142
10.3.2	Simulation Results	143
10.4	Summary	144
<b>11</b>	<b>Asymptotic Performance Analysis for Channel-Aware Scheduling</b>	149
11.1	Extreme Value Theory	150
11.2	Asymptotic Throughput Analysis of Single-Carrier Networks	152

	<i>Contents</i>	xiii
11.2.1	System Model	152
11.2.2	Throughput Analysis for Rayleigh Fading	153
11.2.3	Throughput Analysis for General Channel Distributions	157
11.2.4	Throughput Analysis for Normalized-SNR-Based Scheduling	160
11.2.5	Numerical Results	163
11.3	Asymptotic Delay Analysis of Single-Carrier Networks	163
11.3.1	Asymptotic Distribution of Service Time	165
11.3.2	Average Waiting Time	166
11.4	Asymptotic Performance Analysis of Multicarrier Networks	167
11.4.1	Asymptotic Throughput Analysis	168
11.4.2	Asymptotic Delay Analysis	168
11.4.3	Delay Performance Comparison	169
11.5	Summary	171
 <b>PART THREE DISTRIBUTED CROSS-LAYER OPTIMIZATION</b>		 175
<b>12</b>	<b>Overview</b>	178
12.1	Design Objective	178
12.2	Distributed Multi-User Diversity	179
12.3	Approaches	181
<b>13</b>	<b>Opportunistic Random Access: Single-Cell Cellular Networks</b>	184
13.1	Channel-Aware Aloha	185
13.1.1	Protocol Design and Parameter Optimization	187
13.1.2	Performance Analysis	190
13.2	Opportunistic Splitting Algorithms	191
<b>14</b>	<b>Opportunistic Random Access: Any Network Topology</b>	195
14.1	Network Model	195
14.2	Optimal Design Rules	197
14.2.1	MAC Layer Analysis	199
14.2.2	Physical Layer Analysis	200
14.2.3	Criterion for Cross-Layer Design	201
14.3	Low-Complexity MAC	202
14.4	Optimal PHY Operation	206
14.4.1	Physical Layer Optimization with Channel Inversion	206

14.4.2	Physical Layer Optimization with Adaptive Modulation and Power Allocation	208
14.5	System Performance	211
14.5.1	Network Performance Improvement	211
14.5.2	Suboptimality Gap	214
<b>15</b>	<b>Optimal Channel-Aware Distributed MAC</b>	<b>216</b>
15.1	System Description	217
15.2	Channel-Aware Medium Access Control	220
15.3	Optimization	225
15.3.1	CRS 1	226
15.3.2	CRS $k, k > 1$	227
15.4	Robustness Analysis	231
15.5	Simulation Results	235
<b>16</b>	<b>Opportunistic Random Access with Intelligent Interference Avoidance</b>	<b>241</b>
16.1	Intelligent Interferer Recognition	242
16.2	Co-channel Interference Avoidance MAC	244
16.3	Parameter Optimization	247
16.3.1	Trigger Selection	247
16.3.2	An Alternate Trigger Mechanism Using Location Knowledge	249
16.4	Network Performance	251
16.4.1	Relationship of Trigger and SNR	251
16.4.2	Performance Improvement	252
<b>17</b>	<b>Distributed Power Control</b>	<b>257</b>
17.1	System Model	257
17.2	Power Control for Real-Time Traffic	259
17.2.1	Distributed Power Control	261
17.3	Power Control for Elastic Traffic	262
17.3.1	Existence of Equilibrium	265
17.3.2	Uniqueness of Equilibrium in Single-Channel Systems	267
17.3.3	Uniqueness of Equilibrium in Multi-Channel Systems	270
17.3.4	Distributed Power Control with Pricing	273
<b>PART FOUR CROSS-LAYER OPTIMIZATION FOR ENERGY-EFFICIENT NETWORKS</b>		<b>277</b>

<b>18</b>	<b>Overview</b>	280
	18.1 Lighting Analogy	281
	18.2 Methodology	284
<b>19</b>	<b>Energy-Efficient Transmission</b>	288
	19.1 Energy Efficiency Capacity	288
	19.2 Ideal Transmission	289
	19.3 Energy-Efficient Transmission in Practice	290
	19.4 Energy-Efficient Link Adaptation in Frequency- Selective Channels	296
	19.4.1 Modeling of Energy-Efficient Link Adaptation	297
	19.4.2 Design Principles	299
	19.4.3 Constrained Energy-Efficient Link Adaptation	301
	19.4.4 Energy-Efficient Downlink OFDMA Trans- mission	303
	19.4.5 Iterative Algorithm Design	304
	19.4.6 Energy Efficiency Gain	308
	19.5 Low-Complexity Energy-Efficient Link Adaptation	309
	19.6 Energy-Efficient MIMO and MU-MIMO Link Adaptation	312
	19.6.1 Energy-Efficient MU-MIMO Modeling	313
	19.6.2 Principles of Energy-Efficient MU-MIMO Power Allocation	317
	19.6.3 Energy-Efficient MU-MIMO with Improved Circuit Management	318
	19.6.4 Energy Efficiency Gain	326
<b>20</b>	<b>Centralized Energy-Efficient Wireless Resource Management</b>	331
	20.1 Overview	331
	20.1.1 Circuit Component Management	332
	20.1.2 Time-Domain Resource Management	332
	20.1.3 Frequency-Domain Resource Management	334
	20.1.4 Spatial-Domain Resource Management	334
	20.2 Energy-Efficient OFDMA in Flat-Fading Channels	335
	20.2.1 Resource Allocation without Fairness	336
	20.2.2 Resource Allocation with Fairness	338
	20.2.3 Performance Comparisons	339
	20.3 Energy-Efficient Scheduling in Frequency-Selective Channels	341
	20.3.1 Time-Averaged Network Energy Efficiency	343
	20.3.2 Energy-Efficient Scheduler	345
	20.3.3 Network Performance	349

<b>21</b>	<b>Distributed Energy-Efficient Wireless Resource Management</b>	353
21.1	Distributed Energy-Efficient MAC Design	353
21.1.1	General Rules of Distributed MAC Design	355
21.1.2	Impact of Traffic Load on Energy Consumption	356
21.2	Energy-Efficient Communications in Special Regimes	361
21.2.1	Circuit Power Dominated Regime	362
21.2.2	Transmit Power Dominated Regime	362
21.2.3	Noise Dominated Regime	363
21.2.4	Interference Dominated Regime	364
21.3	Distributed Energy-Efficient Power Control in Frequency-Selective Channels	365
21.3.1	Non-cooperative Energy-Efficient Power Optimization Game	367
21.3.2	Existence of Equilibrium	368
21.3.3	Uniqueness of Equilibrium in Flat Fading Channels	369
21.3.4	Uniqueness of Equilibrium in Frequency-Selective Channels	370
21.3.5	Conservative Nature of Power Control	371
21.3.6	SE and EE Improvement	372
<b>22</b>	<b>Energy-Efficient Cellular Network Design</b>	376
22.1	Fundamental Tradeoffs in Cellular Network Resource Utilization	376
22.1.1	Spectral and Energy Efficiency in Single User Systems	377
22.1.2	Spectral and Energy Efficiency in Multi-User Systems with Orthogonal Selective Channels	378
22.1.3	Spectral and Energy Efficiency in Multi-User Systems with Interference Channels	381
22.2	Energy Efficient Homogeneous Network Deployment	383
22.3	Energy Efficient Heterogeneous Network Deployment	386
22.4	Energy-Efficient Cellular Network Operation	388
22.4.1	Energy-Efficient Cell Breathing	388
22.4.2	Energy-Efficient BS Sleeping	389
22.4.3	Cell Size Adaptation Techniques	389
22.4.4	Other Energy-Efficient Designs	390
<b>23</b>	<b>Implementation in Practice</b>	392
<b>Appendix A</b>	<b>Proofs of Theorems and Lemmas</b>	400
