Preface *page* xi

Acronyms xv

Notations xxi

1 Introduction 2

1.1 Historical Perspective on Radio Resource Management 2

1.2 Key Problems in Wireless Systems 5

1.2.1 Path loss - the early days 6

1.2.2 Thermal Noise 7

1.2.3 Interference - the limited spectrum 8

1.2.4 Infrastructure cost and energy consumption 12

1.3 Wireless Access Networks – the issues 12

1.4 Outline of the book 19

2 Wireless Network Models 23

2.1 Introduction 23

2.2 Models for Wireless Access Networks 26
2.3 Services Scenarios and Performance Metrics 30
2.4 Radio Resource Management in Wireless Access Networks 34
2.4.1 Orthogonal Signal Sets 40
2.4.2 Guaranteed Service Quality - Blocking 41
2.4.3 Best Effort - Non-Blocking 42
Exercises 46

3 Medium Access Control 49
3.1 Overview 49
3.2 Data Traffic and Performance Measures 52
3.2.1 Delay 53
3.2.2 Delivery Performance 54
3.2.3 Throughput 56
3.3 Contention-Free Access Protocols 57
3.3.1 Resource Assignment Techniques 57
3.3.2 Dynamic Access Protocols 72
3.4 Contention-Based Access Protocols 78
3.4.1 ALOHA 79
3.4.2 Carrier Sense Multiple Access (CSMA) 87
3.4.3 CSMA with Collision Detection 90
3.4.4 Carrier Sense Multiple Access with Collision Avoidance (CSMA/CA) 91
3.5 Applications 105
3.5.1 IEEE 802.11 105
3.5.2 Cellular Networks 107
Exercises 110

REFERENCES 111

4 Scheduling 113
4.1 Issues in Wireless Scheduling 118
4.1.1 Quality of Service 118
4.1.2 Channel Variation 121
4.2 Wireless Scheduling and Capacity Region 122
4.2.1 Uplink Multiuser Capacity 125
4.2.2 Downlink Multiuser Capacity 128
4.3 Round Robin Scheduling 132
4.4 Max Throughput Scheduling 132
4.5 Proportional Fair Scheduling 135
4.6 Max-Min Scheduling 138
4.7 Max Utility Scheduling 140
4.8 Scheduling in OFDMA Systems 148
4.8.1 Max-Throughput Scheduling in OFDMA 149
Exercises 157

REFERENCES 158

5 Principles of Cellular Systems 161
5.1 Introduction 161
5.2 Orthogonal Multiple Access Cellular Systems 162
5.2.1 Coverage Planning 162
5.2.2 Static channel allocation 164
5.2.3 Traffic-Based Capacity Analysis 178
5.2.4 Best Effort Data Services 184
5.2.5 Outage Based Capacity Analysis 190
5.2.6 Directional Antennas and Sectorisations 199
5.3 CDMA Cellular Systems 204
5.3.1 Uplink Capacity of DS-CDMA Systems 209

5.3.2 Traffic-Based Capacity of DS-CDMA Systems 218
5.3.3 Down-Link Capacity of DS-CDMA Systems 220
5.3.4 Multi-Service DS-CDMA Systems 223
Exercises 226

REFERENCES 241

6 Transmitter Power Control 242
6.1 Introduction 242
6.2 Performance Metric and Conditions of Achievability 243
6.3 Centralized Power Control 248
6.3.1 SIR Balancing 248
6.3.2 Admission Control 251
6.4 Distributed Power Control 252
6.4.1 Iterative Power Control 253
6.4.2 Convergence 254
6.4.3 General Sufficient Conditions of Convergence 255
6.4.4 Distributed Power Control with Power Constraints 259
6.4.5 Admission Control 261
6.4.6 Dynamics of Power Control 262
6.5 Power Control for Elastic Traffic 263
6.5.1 Achievable Region 263
6.5.2 Distributed Power Control for Wireless Data 267
6.6 Power Control in DS-CDMA Cellular Systems 274

Exercises 283

REFERENCES 290

7 Interference Management 293

7.1 Classification of Interference Management Techniques 294

7.1.1 Interference Management Categories 295

7.1.2 Key Elements of Interference Management 297

7.2 Interference Avoidance 300

7.2.1 Reuse Partitioning 301

7.2.2 Multi-cell Scheduling 307

7.3 Interference Randomization 310

7.4 Interference Cancellation 315

7.4.1 Successive Interference Cancellation 316

7.4.2 Transmit Beamforming 318

7.5 Interference Management for Heterogeneous Networks 320

Exercises 324

REFERENCES 329

8 Association and Handover 331

8.1 An Anatomy of Handover 332

8.1.1 Location Management and Handover 332

8.1.2 Types of Handover 333

8.1.3 Handover Phases 335

8.2 Handover Decision Problem 337

8.2.1 Performance Metric 337

8.2.2 Tradeoff between Handover Frequency and Failure 339

8.2.3 Impact of Handover Criteria 344
8.2.4 An Example of Handover Decision Algorithm 347
8.3 Handover Resource Management 349
8.4 Soft Handover 356
8.4.1 Soft Handover Procedure in Practical Systems 356
8.4.2 Fade Margin Improvement 359
8.4.3 Effects of Soft handover on DS-CDMA Capacity 362
8.5 User Association 368
8.5.1 Load Balancing 368
8.5.2 Association in Heterogeneous Networks 370
Exercises 372

REFERENCES 376

9 Energy-Efficient Design 377
9.1 Energy Consumption in Wireless Networks 379
9.2 Energy-Efficient Transmission 381
9.2.1 Ideal Transmission 382
9.2.2 Energy-Efficient Transmission in Practice 384
9.2.3 Energy-Efficient Transmission in Frequency-Selective Channels 391
9.3 Tradeoff in Network Resource Utilization 399
9.3.1 Energy and Spectral Efficiency in Interference-Free Channels 400
9.3.2 Energy and Spectral Efficiency in Interference Channels 402

9.4 Energy-Efficient MAC Design 405
9.5 Energy-Efficient Network Management 414
9.5.1 Energy-Efficient Network Deployment 415
9.5.2 Heterogeneous Network Deployment 421
9.5.3 Energy-Efficient Cellular Network Operation 421
Exercises 423
REFERENCES 426
10 LTE 428
10.1 Physical Layer for Downlink 429
10.1.1 Orthogonal frequency division multiplexing 429
10.1.2 Orthogonal frequency division multiple access 433
10.1.3 Multiple Antenna Techniques 436
10.2 Physical Layer for Uplink 443
10.2.1 Basics of SC-FDMA 444
10.2.2 SC-FDMA Parameters for LTE 446
10.2.3 LTE Random Access 448
10.3 Interference Management in LTE 451
10.3.1 Soft Frequency Reuse 452
10.3.2 Coordinated multi-point Transmission 459
Exercises 463
