Master thesis in Speech and Natural Language Processing (NLP) using Machine Learning tools with big data sets at WIRAYA, one of Sweden's fastest growing tech startups.

Who are we looking for?

We are looking for exceptionally talented students to work on unique big data sets of automated calls to be classified based on Machine Learning tools from Speech Signal Processing and NLP. No background is required within the field. However, the successful candidate should be passionate about the field with excellent skills in applied mathematics and programming.

Cloud based customer communication with superior results

Wiraya designs and develops the industry's only cloud based platform for tailored, real time customer dialogue. Our solution helps companies activate, engage, and retain customers through individualized large scale communication. It's automated, while staying human. With a solid track-record we deliver immense client value and unmatched conversion results.
