

ANT

**A Distributed Data Storage And Delivery
System Aware of the Underlying Topology**

**Raúl Jiménez
TSLab - KTH**

AIMS

- Design a new content distribution system
- Implement a prototype

OUTLINE

- Background
- Architecture
- Prototype
- Summary
- Future Work

BACKGROUND

- Content Distribution over the Internet
 - Content Providers
 - Internet Service Providers
 - Clients

BACKGROUND

- Content Providers
 - Control
 - Low cost distribution
- Internet Service Providers
 - Reduce inter-ISP traffic
- Clients
 - Fast, easy and cheap service

BACKGROUND

- Current Distribution Systems
 - client/server
 - One server -- many clients
 - P2P
 - Transfers between clients
 - Scalability

BACKGROUND

- How to manage traffic generated by P2P?
 - Analyzing P2P traffic
 - Block
 - Low priority
 - Caching
 - Collaboration
 - Lookup service
 - Caching

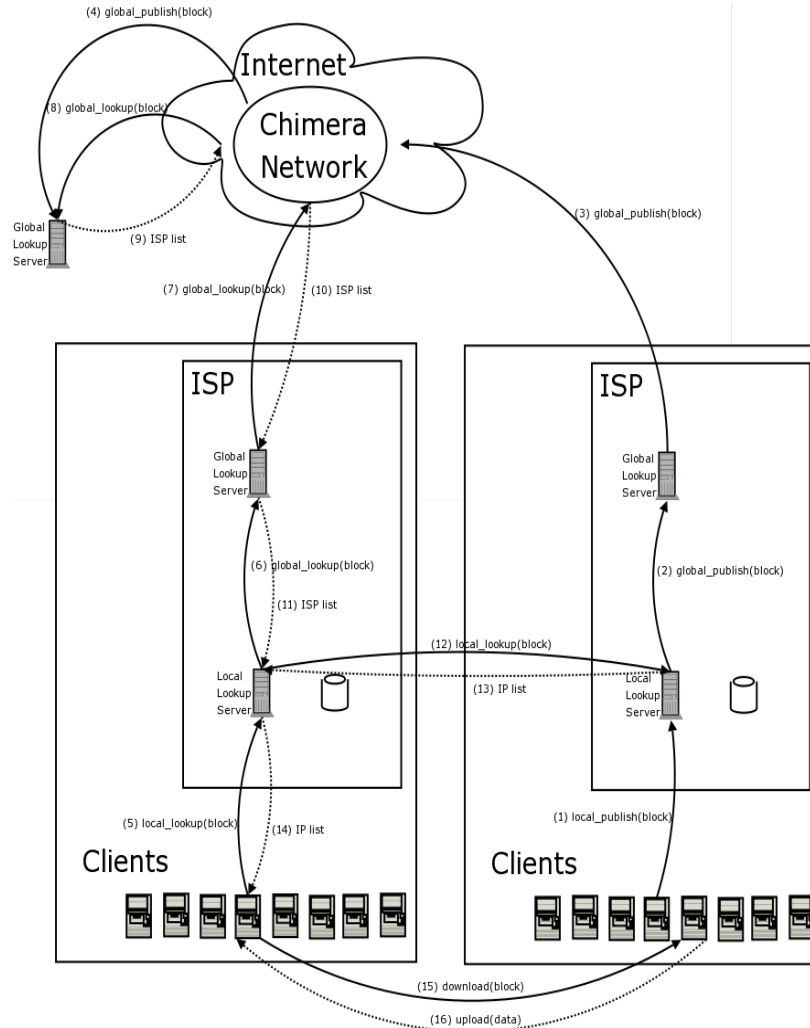

SYSTEM ARCHITECTURE

- Semantic Layer
- Policy Layer
- **Data Layer**

COMPONENTS

- ANT-HILL Global Lookup Server
- ANT-HILL Local Lookup Server
- ANT Client

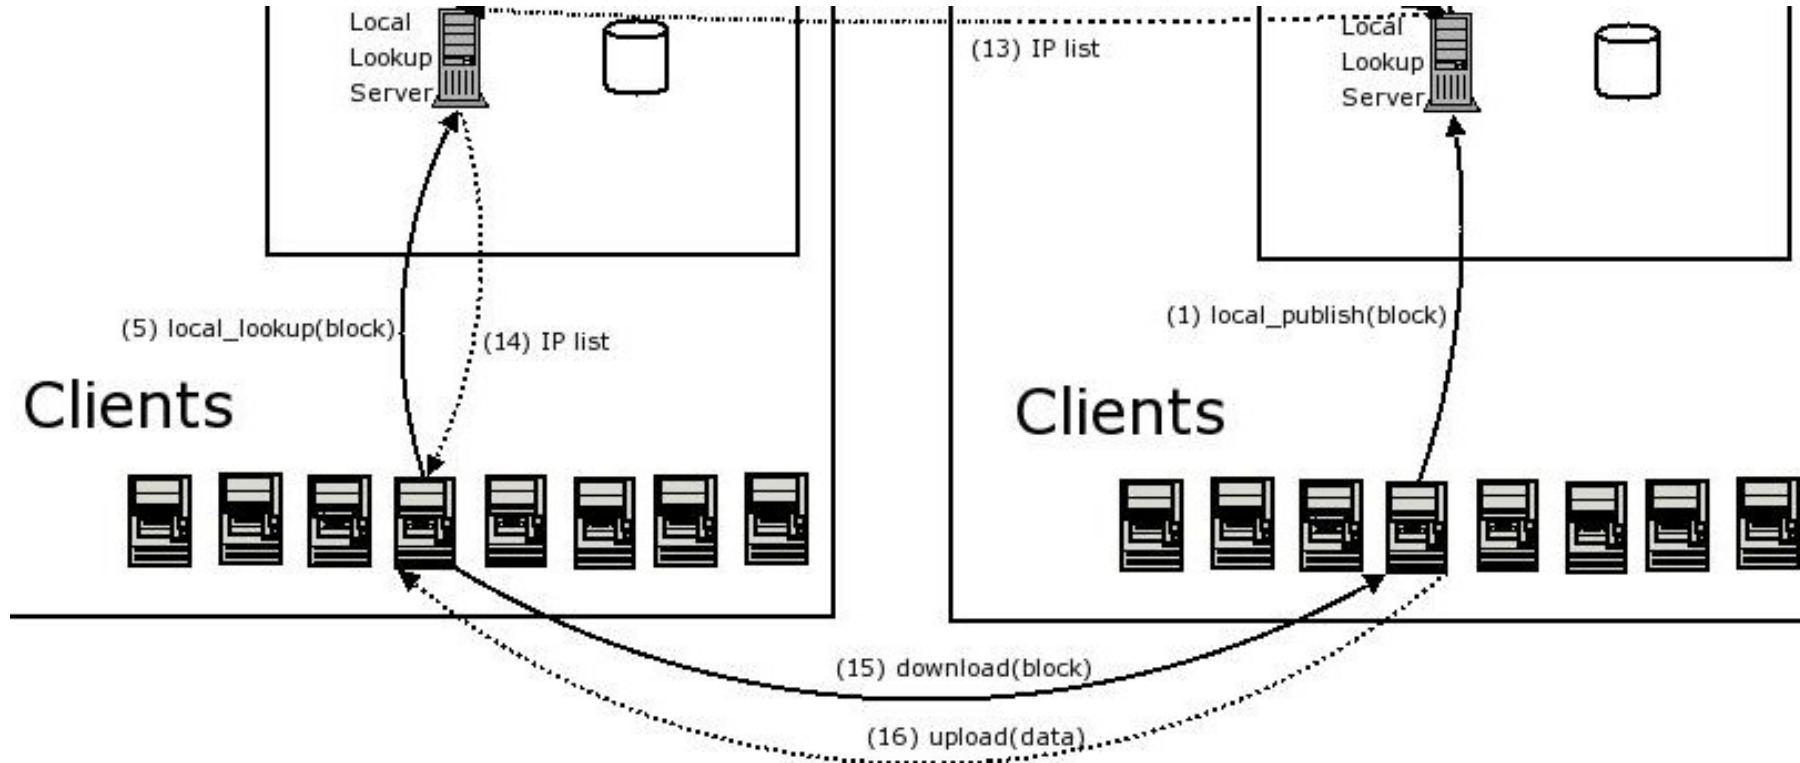

SYSTEM ARCHITECTURE

Client

- Publish
- Lookup
- Download

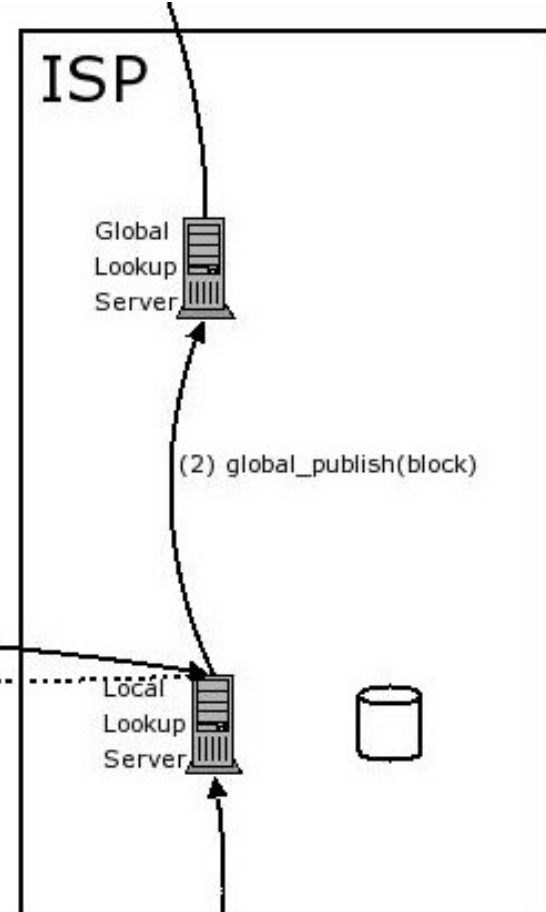

Client

Local Lookup Server

- Prioritize local transfers
- Find the best source

Clients

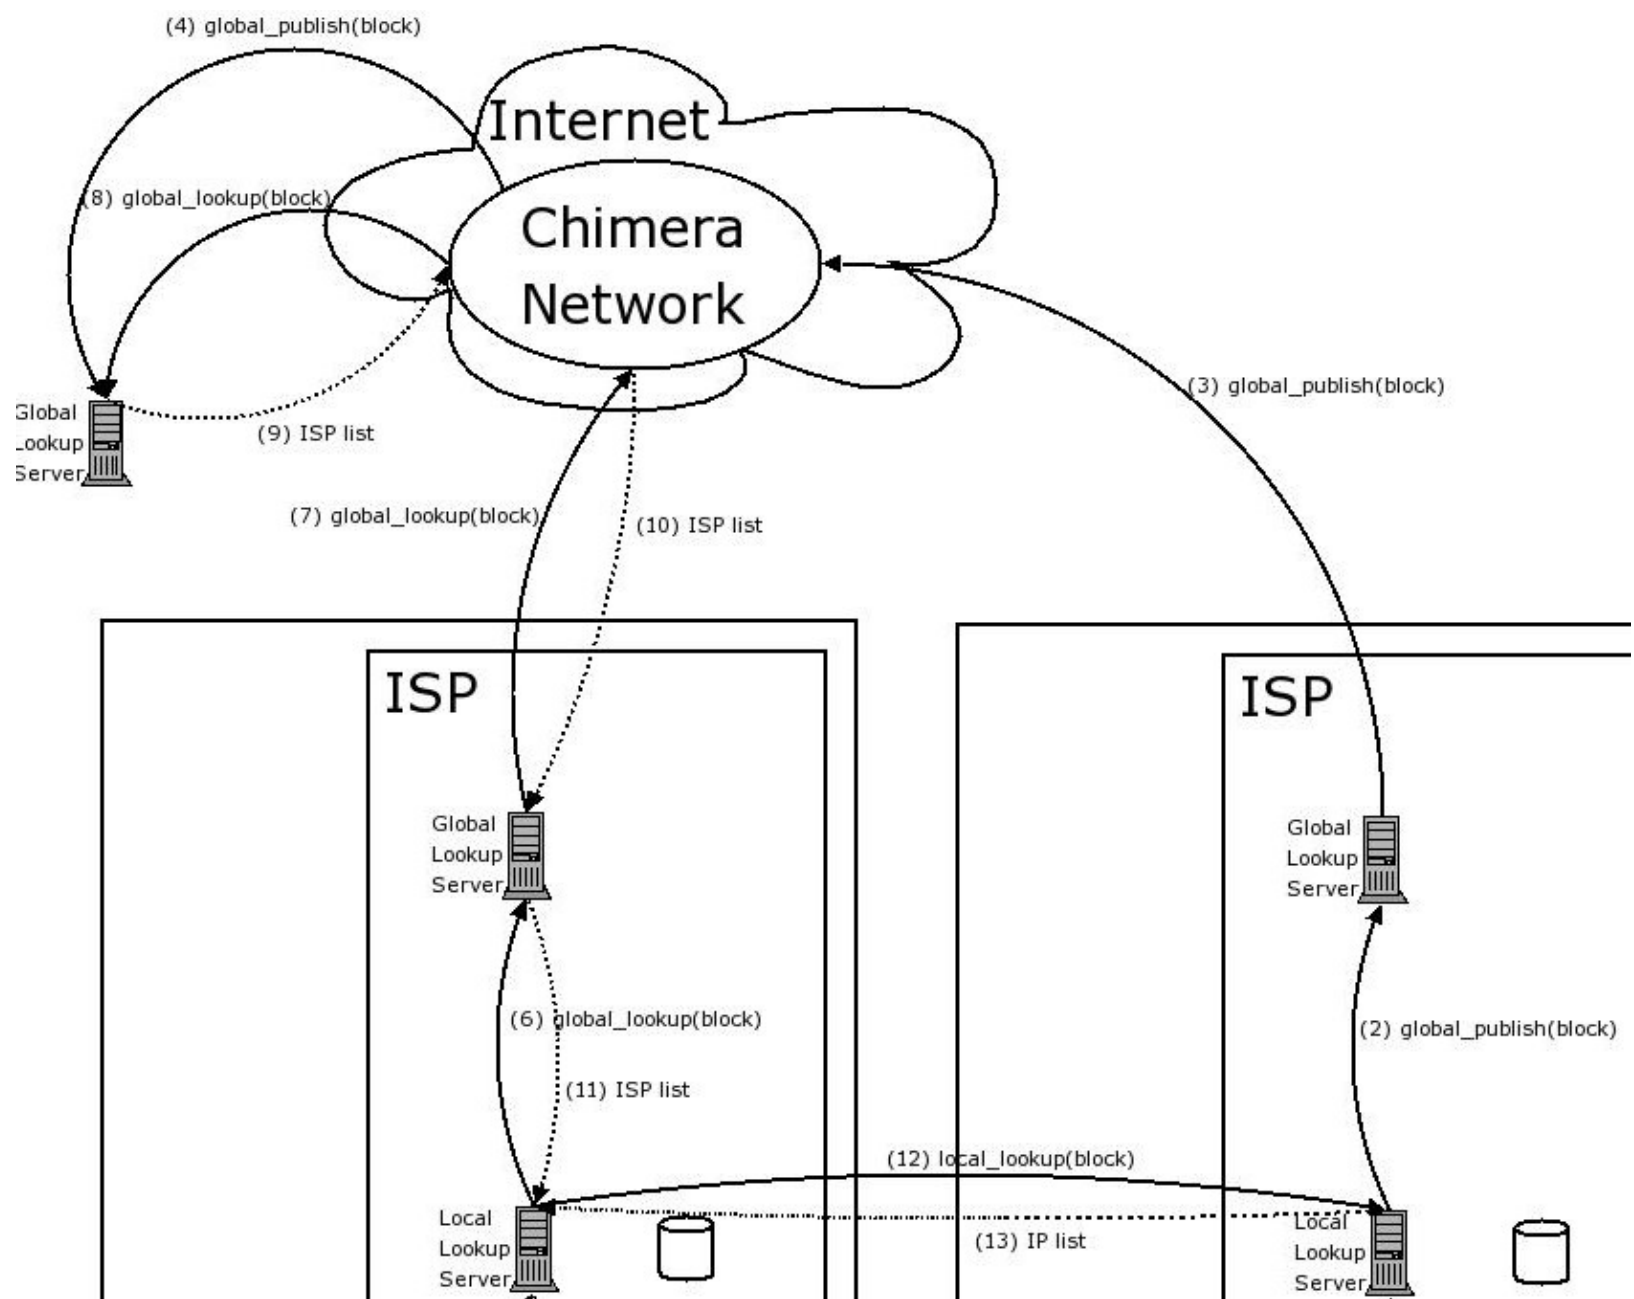

Clients

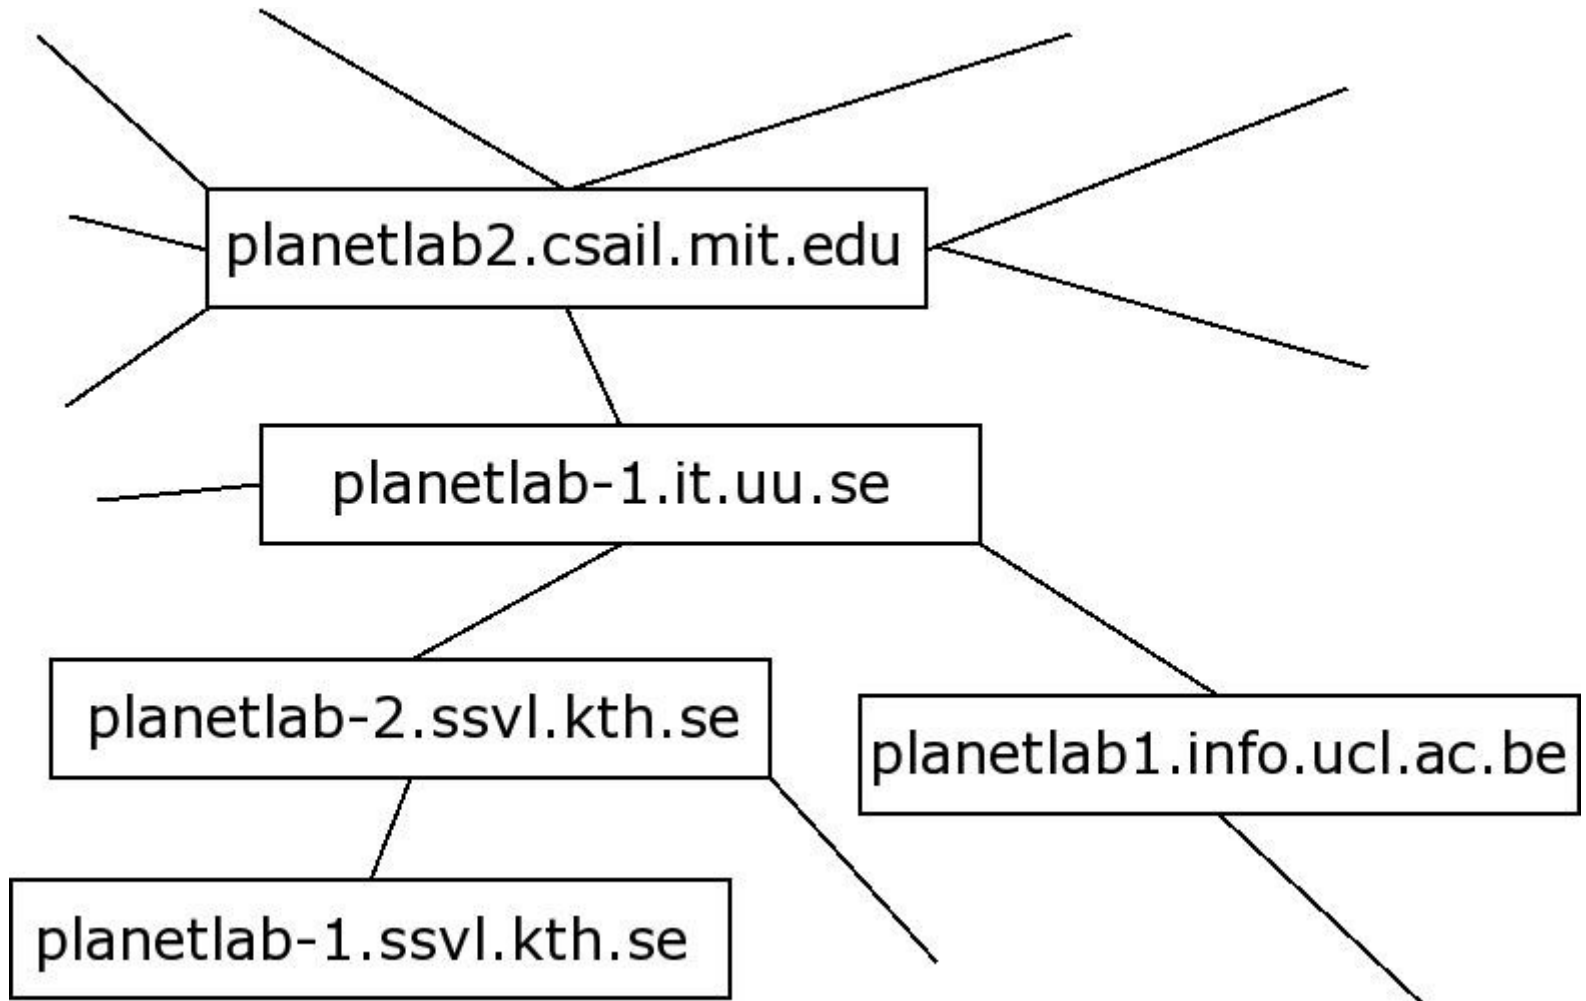

Global Lookup Server

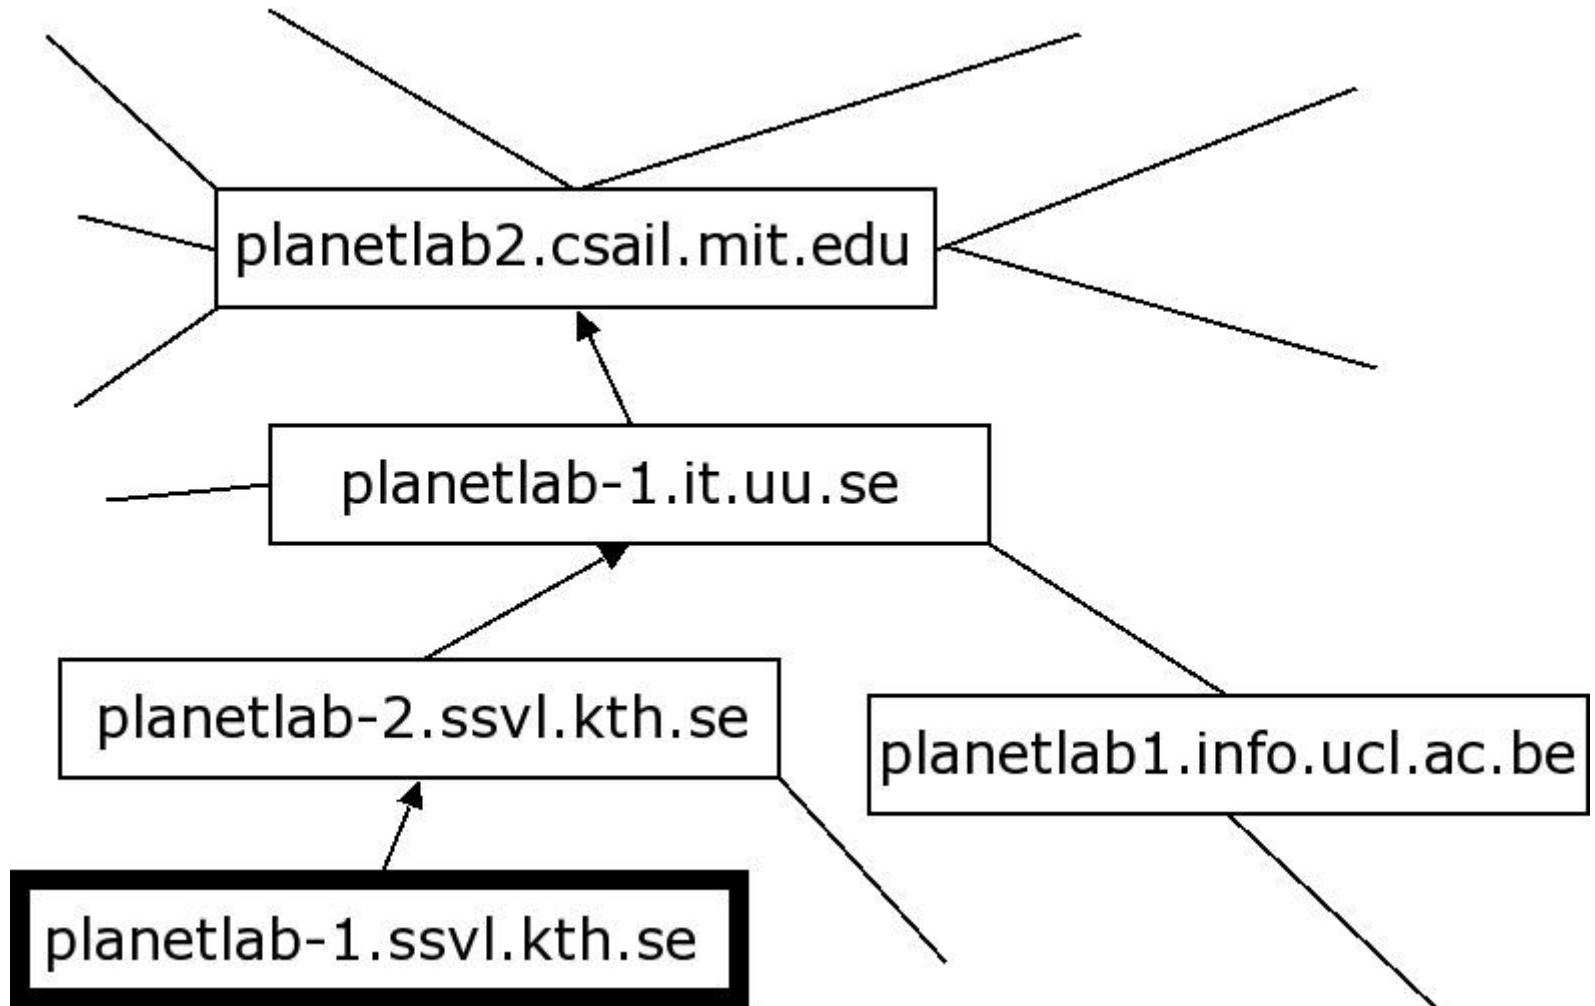

- Link between the local network and the Internet
- A lookup service topologically aware:
Chimera

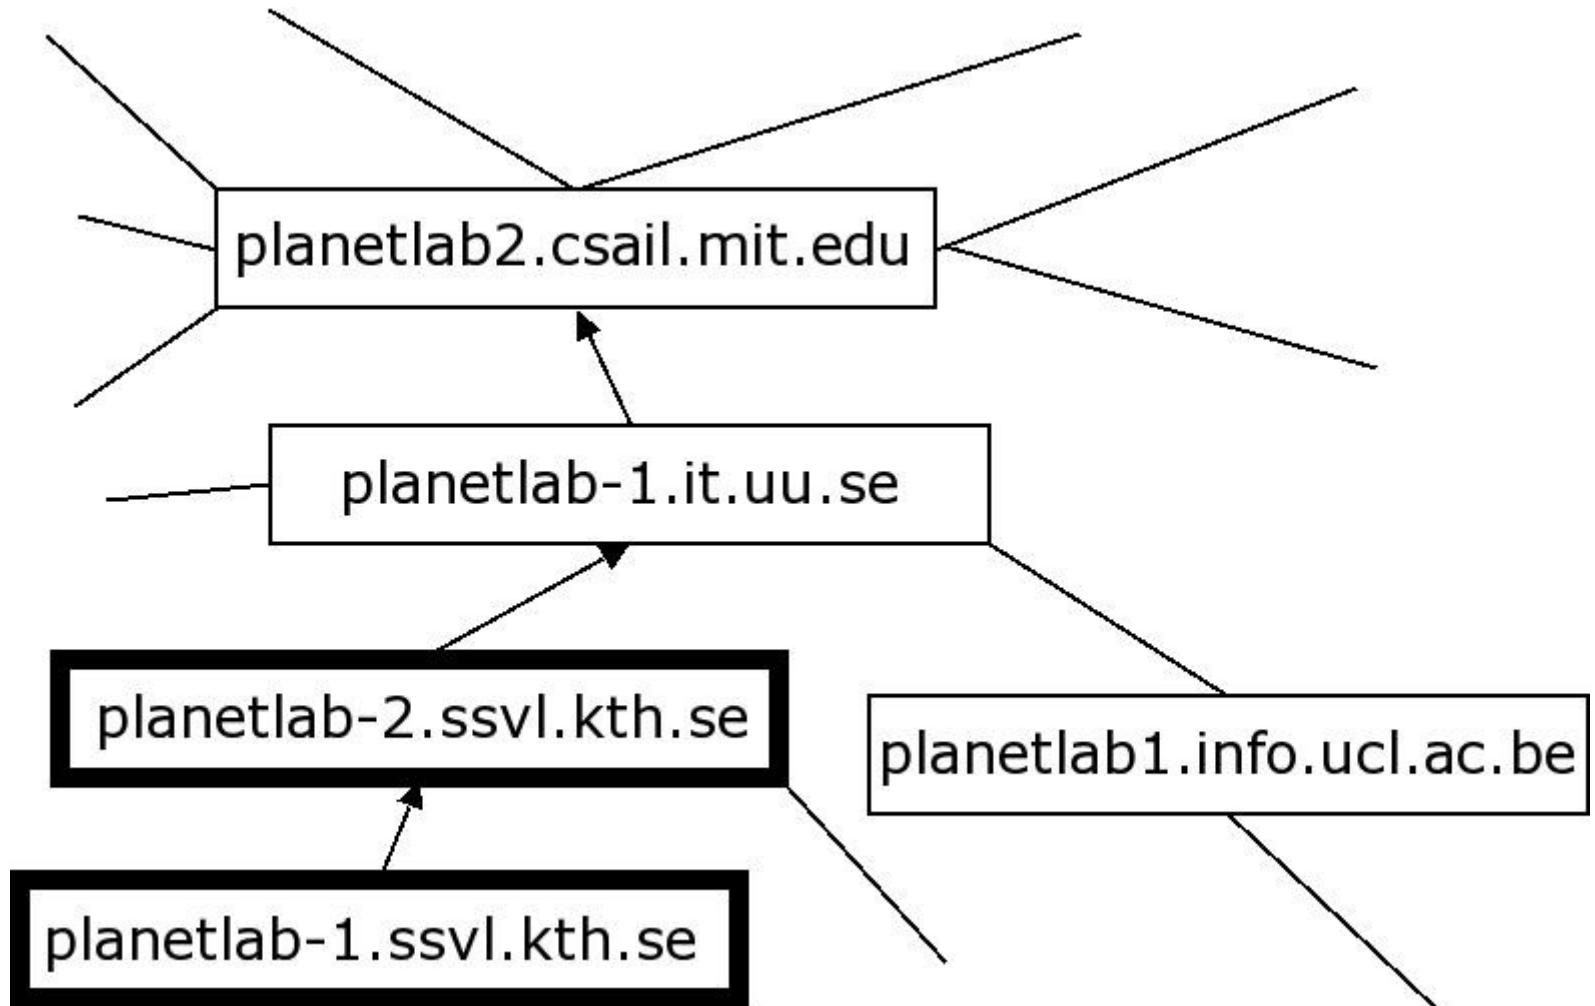

CHIMERA NETWORK

SUMMARY

- The problem has been analyzed
- A new design was carried out
- A prototype of the data layer has been implemented
- Tested over 300 hosts around the world

FUTURE WORK

- Prototype measurements
- Policy layer
- Semantic layer
- Pre-fetch
